

Maslov Kirill.

SENIOR LINUX SYSTEMS ADMINISTRATOR

/in/breakneck · github.com/breakneck-git · @breakneck · breakneck.mail@gmail.com · Batumi, Georgia

§ 01

PROFILE

Linux systems administrator with 11+ years keeping production infrastructure online under 24/7 SLAs — from single services to fleets of 200 servers and databases up to 10 TB. I own systems end to end: monitoring and incident response, CI/CD, backups, and zero-downtime migrations across the Linux stack (CentOS, Debian), Proxmox, MySQL/PostgreSQL, Zabbix, and the Atlassian ecosystem.

As comfortable firefighting a live incident as engineering the automation that prevents the next one.

§ 02

EXPERIENCE

WORK	Hopper Support LLC 2020.04 → 2023.01 Remote · 2y 9m Senior Systems Administrator – Ran ~80 production servers (in-house plus client projects) under 24/7 SLAs for large enterprise and public-sector clients — a CentOS / RHEL fleet held at multi-year uptime, with downtime limited to planned-maintenance windows. – Migrated Jira and Confluence off Atlassian Cloud to self-hosted, then into a data-centre environment, under tight deadlines — cutting recurring Atlassian licensing costs. – Operated dozens of isolated Bitrix dev / staging environments, enabling safe parallel development and testing for client web projects. – Built GitLab CI/CD with automatic QA-stand deployments on a Traefik + GitLab + Ansible pipeline. – Architected client web applications (LEMP with Node.js and Redis) and kept production Java services running. nginx · php · node.js · redis · jira · confluence · bitrix · gitlab ci · ansible · traefik · docker · zabbix Individual Entrepreneur 2019.05 → Present Remote · 7y Linux Teacher – Taught Linux fundamentals to QA engineers and developers across 2–3 cohorts — designed the curriculum spanning shell, networking, systems internals, and production troubleshooting. – Reviewed and graded homework with individual feedback for an entire 300+ student stream. Systems Architect @ Atlant LLC – Built and ran the company's entire IT from scratch — infrastructure, monitoring, software updates, and feature rollouts. – Handled incident troubleshooting, workflow design, task automation, and backup strategy. – Deployed a corporate mail server from scratch — Postfix + Dovecot with SPF/DKIM/DMARC and an anti-spam pipeline. postfix · dovecot · iredmail · spf · dkim · dmarc · clamav · spamassassin Tensor Company LLC 2013.11 → 2020.04 Yaroslavl · 6y 6m Linux Systems Administrator – Held full ownership of ~200 production servers (CentOS) serving large enterprise and public-sector systems — configuration, monitoring, documentation, capacity planning, and databases up to 10 TB. – Sustained multi-year server uptime, with interruptions limited to planned maintenance. – Deployed ClickHouse + ZooKeeper with full monitoring and backup — eliminating data-loss risk and raising fault tolerance. – Built Zabbix monitoring backed by custom Python and Bash tooling, and authored an internal Python auth library that simplified script integration and cut maintenance. – Ran production RabbitMQ, Elasticsearch, ClickHouse and Redis; optimised the on-duty Zabbix tooling for faster incident response. centos · zabbix · clickhouse · zookeeper · rabbitmq · elasticsearch · redis · python · bash
------	---

Wave-service LLC

2013.03 → 2013.11
YaroslavL · 9m

Linux Systems Administrator

- Administered ~10 Debian / FreeBSD / CentOS servers under 24/7 SLA — monitoring, maintenance, and software updates.
- Managed network routing (BGP, OSPF) and active D-Link equipment, and automated routine operations.
- Ran Apache / nginx web and forum hosting, with production Zabbix, Request Tracker and ACP LanBilling.

debian · freebsd · centos · apache · nginx · bgp · ospf · zabbix

§ 03

SELECTED PROJECTS

BUILD

Homelab production infrastructure

Runs a private homelab on a Raspberry Pi hub: a phone dashboard behind Cloudflare Zero Trust, plus a WireGuard hub, nftables and systemd services.

Meshtastic ↔ Telegram bridge

Bridges a Meshtastic (LoRa) mesh and Telegram both ways — SQLite history, a heartbeat that catches dead TCP tunnels in ~90s, and a phone battery monitor.

Telegram bots

Two production Telegram bots — an LLM RSS pipeline (scrape, summarise, tag, illustrate; multi-provider fallback, embedding dedup) and a tabletop-RPG dice bot with a custom roll-notation parser.

notion2git

Mirrors five Notion databases to a git repo every 30 minutes via a Pipedream workflow — atomic GitHub-API commits, hash-compared, so tools read files instead of the rate-limited Notion API.

aw-notion

CODE ↗ (https://github.com/breakneck-git/aw-notion)

Syncs ActivityWatch focus blocks into a Notion time-log database — idempotent backfill, deduplication, and scheduled runs via launchd.

aw-watcher-ax

CODE ↗ (https://github.com/breakneck-git/aw-watcher-ax)

Captures active app context on macOS — e.g. the Claude Desktop conversation title — via the Accessibility API, packaged as a real .app under launchd. Feeds aw-notion.

CV

The site you are reading — a static-site generator that builds this CV from git-versioned content (Python and Jinja), self-hosted over HTTPS with private GoAccess analytics.

§ 04

STACK

SKILLS & LANGUAGES

OS / VIRTUALISATION

Linux (CentOS, Debian, RHEL) · FreeBSD · Proxmox

DATABASES

MySQL · PostgreSQL · ClickHouse · Redis · Elasticsearch

SCRIPTING / AUTOMATION

Bash · Python · Ansible · systemd

NETWORKING

BGP · OSPF · TCP/IP · Cloudflare Zero Trust

MAIL

Postfix / Dovecot · SPF/DKIM/DMARC

WEB / PROXY

nginx · Apache · Traefik

MONITORING

Zabbix · GoAccess

CI / CONTAINERS

GitLab CI · GitHub Actions · Docker

MESSAGING

RabbitMQ · MQTT

ATLASSIAN

Jira · Confluence

English Upper-Intermediate, B2 Russian Native

§ 05

EDU

EDUCATION & CERTIFICATIONS

YaroslavI Urban Planning College

2009 — 2013

Software engineer, Department of Information Technology,
Software Specialization

LinkedIn Skill Assessment badge top 5% of linux

2023

Systems administration pro [IDECO] (2012, 2013, 2017)

Basics of network technology — D-Link
